1039 Double module lamp 6 LED UVA 365 nm in stainless steel

Coverage	110 m ²
Type of LED	3535 High Power
Number of LED	12
Power	18 W
Wavelength	365 nm
Emission angle	120°
Structure	AISI 304 stainless steel
Dimensions	540*370*130 (h) mm
Weight	4,1 kg
Protection factor	IP65
Installation	wall-mounted or suspended by chain and hooks (included in the package)
Adhesive panel	445*364 mm

Specifications

ENTO SKY IP65 is a tool for monitoring and controlling flying pests in the HACCP field.

Thanks to the in-depth study of the two 6-LED modules, HP ensures high capture performance for both moths and diptera that are captured by the glue plate supplied in a discreet and efficient way. Each LED module guarantees a power comparable to a 20 watt fluorescent tube. ENTO SKY is made of stainless steel.

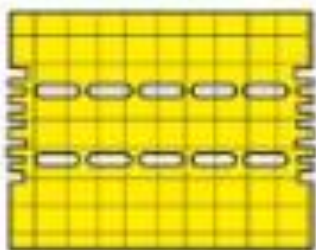

An ENTO SKY lamp installed at a height of 2 meters protects spaces up to 110 m² (the coverage area is to be considered indicative as it may vary according to the conformation of the monitored environments). This model can be installed both on the wall and suspended using chains and S-shaped hooks supplied in the sales package.

The LED module has a 3-year autonomy and is easily replaceable with the help of quick-connect connectors.

ENTO SKY complies with food hygiene regulations (HACCP) and is widely used throughout the food supply chain, particularly in areas with a high humidity content.

Sales packaging

Single packaging with lamp equipped with power cable, 2 9w lamps, 1 plastic glue panel, s-shaped hooks and fixing chain, use and maintenance manual.
